Statistics

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 22.687; Variance 86.099; scale 0.264

                                                                                                                                                                                                                                                                       The present sequence represents a 1-cell epitope peptide from Japanese cypress pollen antigen Chaol. The present invention describes peptides which correspond to the 1-cell epitope sites on Japanese cypress pollen antigens chaol and Chaol. The peptides can be used as a reagent for the diagnosts of alleray to Japanese cypress pollen, and as an antigen in the treatment and prevention of spring tree pollen disease in which the Sequence 20 AA:

Example 1: Page 14-15: 71pp; Japanese.
The present sequence represents Japanese cypress pollen antigen Chadi. The present invention describes peptides which correspond to the Toell epitope sites on Japanese cypress pollen antigens Chad, and Chaoi. The peptides can be used as a reacent for the diagnosts of allergy to Japanese cypress pollen, and as an antigen in the treatment and prevention of spring tree pollen disease in which the pollingsis involves reactivity to Japanese cypress pollen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gars
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Saps

The frescnt seguence as the C. obtuse policy acceptant of a the frescnt seguence of the C. obtuse policy and the coll epitopes of which can be used in the development of a preventate and treating agent for C. obtusa policy politicasis.

C. obcusa policy (2.4 kg) was degreased with distributions; and dried at room temp, overnight. Cha o I was sepd, from it and publised. NNA was extracted from C. obtusa polien, and mRNA and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          28-NOV-1996 (first entry)
Chamaecyparis obtusa pollen allergen Cha o I CDNA (B).
Pollen allergen: Cha o I: T-cell epitope: prevention: meatmen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ಼
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Modified Cryptomeria japonica (Cry j) I peptide(s) - useful for treating allergy to japanese cedar pollen allerae, or treating allergy to japanese cedar pollen allerae, or laminologically cross reactive allergens.

Disclosure, Figure 2: 60pp, English.

Disclosure, Figure 2: 60pp, English.

Novei peptides of cry j I have been modified as a part of a preformulation scheme to develop an optimised drug product for therapeutic treatment of humans suffering from allergy to Japanese cedar pollen allergen or an allergen which is immunologically cross reactive with Japanese cedar pollen allergen. Such modified peptides possess certain characteristics which reader them particularly suitable for drug product formulation. Peptide fragments of Cry j I modified and unmodified, are given in R82491-R82555. This peptide fragment corresponds to amino acids 31:330 of the allergen mature
                                                                                                                                                                                                                                                                                              Discrésure: Fig 16: 137pp: English.
The sequence is that of Jun s I, a homologue of the Japanese cedar pollem allorgen Cry j I. Antigenic peptides derived from it can be used for the treatment and diagnosts of allergies associated sequence. 16: AA:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; Fig 13: 137pp; Englis:

The sequence is that of an isolated peptide of the Japanese cedar pollen allergen Cry 1 (amino acids 311-330). The peptide, C11-32, can be used the treatment and diagnosis of allergies associated with Japanese cedar pollen. It has enhanced therapeutic properties but reduced side effects come; d to naturally occurring allerges.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antigens derived from Japanese cedar pollen allergen Gry : . . contain at least two T cell apprope(s), used to treat or diagnose

A linked T cell epitope peptide - used for the treatment of significals: Pages 19-20; 21pp; Japanese. Claim 8: Pages 19-20; 21pp; Japanese. Gerived from the sugi allergen proteins Cryji (W80339-44, K80350-53 and W80355 58) and Cryj2 (W80345-49 and W80354-59). The peptides are useful for the treatment of sugirpullances, an allergic reaction of the body to poller.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ij

Synthetic peolides PI-PIS (see W83643-57) are partial sequences of amino acids 1-157 of the extracellular domain of himan Fas. With between 9 and 11 amino acid residues overlapping one another. Pis See W81059) is a negative control having no homology with human Fas. Pi-PIE were used in an ELISA, Which demonstrated that novel mustine anti-luman Fas conoclonal antibody HPEPA specifically binds and amino acid sequence contain antibody HPEPA specifically binds was subsequently identified. The invention provides humanised HPEPA antibodies (see W82131-3) produced by CDR craftling. These antibudies are capable of inducing apoptosis in abnormal cells expressing Fas. and in contain general models, treatments of cells. They are used to evaluate, in animal models, treatments of

Woiltied Cryptomeria japonica (* y j) 1 peptide(s) - iseful for treating allergy to japanese char pollen allergen or immunologically cross reactive progress.

Claim 1: Figure 3: 60pp. Engl.

Solid 1: Figure 3: 60pp. Engl.

Novel peptides of cry j 1 have an modified as a part of a preformulation scheme to devel an optimised drug product for the rapecutic treatment of humans inferring from allergy to Japanese cedar pollen allergen or an allergen which is immunologically cross reactive with Japanese cedar pollen allergen modified in the postess certain characteristics which render them fortunels (*) possess certain characteristics (*) possess certai
                                                                                                                                                                                                                                                                                                                                                                                              Sire
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               16-APR-1996 (first entry)

Cry : Lapanose Cedar pollen illergen modified peptide (FUI-44.8)

Cry : Lipapanese cedar pollen allergen; modified; drug piodumilion,
allergy: Crytpomeria japonica.
                                                                       allergy clark 18: 137pp; English.

Statistics

Pred. No. is the number of results predicted by mance to have a score greater than or equal to the score of the mosult being printed, and is derived by analysis of the total score distribution.

Natl. Acad. Sci. U.S.A. 92:3809-3813(1995).

-! FJNCTION: THIS MAGNESIUM DEPENDENT ENZYME CATALYZES THE HYDROLYSIS OF ATP COUPLED WITH THE TRANSPORT OF GALCIUM (BY SIMILARITY). SEEMS TO BE INVOLVED IN RIBOSOME ASSEMBLY.

-! CATALYTIC ACTIVITY: AIP + H(2)0 - ADP + ORTHOPHOSPHATE.

-! SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. ENDOPLASMIC
Saccharomyces cerevisiae (Bu. r's yeast).
Eukaryota: Fungi: Asconycota. Saccharomycetes: Saccharomycetales.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20-MAR-1987 (Rel. 04, Created)

WPIL 95-36591/47.

Wodified Cryptomeria (aponic, City 1) Epotide(s) - users, for treating allergy to (apanese vidar police allerge or minurologically proces reacting allergy to (apanese vidar police allerge or Search Flaure 2) English and processor or city 1) Have been modified as a pain of a product for prediction scheme to develop an optimised drug product for the aponic treatment of humans suffering from allergy to Japanese cedar police allergen or an allerge which is immunologically cross reactive with Japanese cedar pollen allergen. Such modified populdes possess certain characteristics which render them particularly consists of truggment corresponds to amino acids 101-120 of the allergen mature fragment corresponds to amino acids 101-120 of the allergen mature
                                                                                                                                                                                                                                                                                                                   used peptide of the Japanese cedar
acids 101-120. The peptide, Curill,

The present sequence represents a multi-epitope poptide which is used as a new immunotherapeutic adent, it comprises I cell epitope reducins from 2 or more different allorgens freeletably linked via arbithue or lyshing dimers), where the I cell epitope regions: have a positivity index greater than 100 as measured in a patient group responding to the allergen; have at least 70% reactivity with lymphocyres from patients responding to the allergen; and are not reactive with influenced builties (195) antibodies from patients responsive multipodies from patients responsive to the allergen; and are an additional and inservent and treat a wide variety of allergen. The apent can be used to prevent and treat a wide variety of allergen in a capit can be used to prevent and treat a wide variety of allerging liseases, etc. by desensitisation. Side effects, etc. those mediated by 135, are reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        W27369 standard: peptide: 80 AA W27369.
W27369: W27369: (first_entry)
W24-MAR1998 (first_entry)
W121-epicope peptide used as immunotherapeutic agent #1.
W121-epicope peptide: Amminotherapeutic agent: alleranc discass.
W17-ecil epicope region: alleranci lymphocyte; imminoglobulic E.
W97426(0.A).
24.MAR-1998 (first entry)
Mulli-epitope peptide used as immunotherapeutic agent *5.
Multi-epitope peptide: immunotherapeutic agent; allery: discass-
I-cell epitope region: alleryen: lymphocyte; immunoalchilu E.
                                                                                                                                                                                                                                                                                                                                                                                                                                Peptide immunostherapeutic agent to treat allerand discusss contains multi-epitope peptide containing T cell epitope regions from different allergens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ...

Peptida immuno: phrapeutic agent to treat allergic diseases -
contains rulti-epitope peptide containing T cell epitope regions

from different allergens

Claim 6: 1496-31: Septe: Japanese.

The present sequence represents a multi-epitope peptide which is used as

The present sequence represents a multi-epitope peptide which is used as

The present sequence represents a multi-epitope peptide which is used as

The present sequence represents a multi-epitope peptide with is used as

The present allergens of petide regions: have a positivity index

Greater than 100 as measured in a patient group responding to the

Allergen: have at least 70% reactivity with lymphocytes from patients

The sponding to the allergen; and are not reactive with immunoglobilin E

(19E) antibodus from patients responsive to the allergen. The agent can

Class antibodus from patients responsive to the allergen and treat a wide variety of allergic diseases.

Sequence 105 AA:
